Blurring of communication between humans with machine communication. In the sign of a Lügenbaron, the question therefore arises: Is the machine the new lier?

A comparison between Trump's communication and tweets generated by artificial intelligence. Can humans even tell anymore who is the creator and who is telling the truth?

mockups

is artifi-cial intel-ligence less than our intel-ligence

For a day without new ideas about Artificial Intelligence (AI). Analysts, investors and futurologists regard AI as one of the strongest drivers of change in the coming years. Besides enthusiasm for the new technology there is also skepticism. Is AI just hype? In February 2019 the former President Trump signed Executive Order 13859 which announced the U.S. "maintaining the United States' national artificial intelligence strategy." This strategy is a concerted effort to promote and protect national AI technology and innovation. The issue of AI is thus of national concern. But at the very time another debate is dividing the country while looking forward to a hard election year during a worldwide pandemic. Spurred on by populists, nationalists and the discord in the country. To solidify his power the president personally is the driving force behind the new paradigm of information, emotion and degradation. There is nothing fishier about fake news, about the kind of propaganda that aims to spread through social networks and create political chaos, especially as we enter an age where artificial intelligence can replace human writers and create an infinite number of fake articles.

Everything that happens in the machine is a black box. Some data is fed in. Processed in the neural network via machine learning – detached from the reality and facts. At the end of it there is something artificial. Something that seems to be human generated, but it isn't. Whether something is true or false often remains hidden even to the observer. Just like the thousands of lines of source code and data records – the brain and the memories of the AI – the effects of the technology are also in the shadow for the masses.

But what happens if one of the largest twitter accounts is also populated by an artificial intelligence? Can a machine make the short postings of Donald J. Trump and even sound like the president himself? Deceiving millions of millions of people. Would you realize it? Give it a try and dive into the sphere of the machine model. Just open up the black box, contained in this folder and decide yourself – what's human and what's the machine brain.

the entire universe.

one word at a time caught in memory bags.

And even the President of Mexico called me – they said their southern border, very few people are coming because they know they're not going to get through our border, which is the ultimate compliment.

FBI Director Christopher Wray just admitted that political crime in... has been... Democrats... despite the... as an attempt... Republican... I STILL WON WHICH... learning to live with it, just like we are... to live with Covid, in most populations far less lethal!!!

Praying for the wishes of Prime Minister Abe of Japan, a great friend of the United States. **He served 8 years in prison, with many remaining. Another misinformation campaign is being launched by Democrats in Congress. Decision within next few weeks!**

Not a day without news about Artificial Intelligence (AI). Analysts, inventors and futurologists regard AI as one of the strongest drivers of change in the coming years. Besides enthusiasm for the new technology, there is also skepticism. Is AI just hype?

In February, 2019 the former President Trump signed Executive Order 13859, which announced the U.S. AI Initiative. This strategy is a concerted effort to promote and protect national AI technology and innovation. The issue of AI is thus of national concern. But at the same time another debate is dividing the country, all while looking forward to an hard election year during a worldwide pandemic. Spurred on by Trump himself, false news, lies and conspiracies are increasingly spreading to the wider society. To rapidly no power the president personally so the driving force behind the new paradigm of information emotion and degrada tion. There is nothing funny about fake news, about the kind of propaganda that aims to spread through social networks and create political chaos especially as we enter an Age where artificial intelligence can replace human writers and create an infinite number of false articles.

Everything that happens in this machines is like a black box. Black box AI is any artificial intelligence system whose inputs and operations are not visible to the user or another interested party. A black box, in a general sense is an impenetrable system. Deep learning is typically conducted through black box development. The algorithm takes millions of data points as inputs and correlates specific data features to produce an output. That process is largely self-directed and is generally difficult for data scientists, programmers and users to interpret. AI bias, for example, can be introduced to algorithms as a reflection of conscious or unconscious prejudices on the part of the developers, or they can creep in through undetected errors.

But at the end there always is something artificial. Something that anyhow often seems to be human. Whether something is true or false often remains hidden even to the observer. Just like the thousands of lines of source code and data records - the brain and the memories of the AI - the effects of the technology are also in the shadow for the masses.

But what happens if one of the largest twitter ac counts is also populated by an artificial intelligence? Can a machine make the short postings of Donald J. Trump and even sound like the president himself? Deceiving millions of people. Would you realise it? Give it a try and dive into the sphere of the machine model. Just open up the black box, contained in this folder and decide yourself - what's human and what's the machines brain.

policy.

Artificial Intelligence (AI) promises to drive growth of the United States economy, enhance our economic and national security, and improve our quality of life. The United States is the world leader in AI research and development (R&D) and deployment. Continued American leadership in AI is of paramount importance to maintaining the economic and national security of the United States and to shaping the global evolution of AI in a manner consistent with our Nation's values, policies, and priorities. The Federal Government plays an important role in facilitating AI R&D, promoting the trust of the American people in the development and deployment of AI-related technologies, training a workforce capable of using AI in their occupations, and protecting the American AI technology base from attempted acquisition by strategic competitors and adversarial nations. Maintaining American leadership in AI requires a concerted effort to promote advancements in technology and innovation, while protecting American technology, economic and national security, civil liberties, privacy, and American values and enhancing international and industry collaboration with foreign partners and allies. It is the policy of the United States Government to sustain and enhance the scientific, technological, and economic leadership position of the United States in AI R&D and deployment through a coordinated Federal Government strategy, the American AI Initiative (Initiative), guided by five principles.
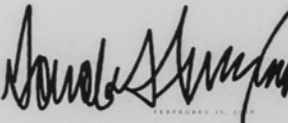

(a) The United States must drive technological breakthroughs in AI across the Federal Government, industry, and academia in order to promote scientific discovery, economic competitiveness, and national security.

(b) The United States must drive development of appropriate technical standards and reduce barriers to the safe testing and deployment of AI technologies in order to enable the creation of new AI-related industries and the adoption of AI by today's industries.

(c) The United States must train current and future generations of American workers with the skills to develop and apply AI technologies to prepare them for today's economy and jobs of the future.

(d) The United States must foster public trust and confidence in AI technologies and protect civil liberties, privacy, and American values in their application in order to fully realize the potential of AI technologies for the American people.

(e) The United States must promote an international environment that supports American AI research and innovation and opens markets for American AI industries, while protecting our technological advantage in AI and protecting our critical AI technologies from acquisition by strategic competitors and adversarial nations.

by the authority vested in me as president by the constitution and the laws of the united states of america, it is hereby ordered as follows.

→

definitions. as used in this order.

(a) the term "artificial intelligence" means the full extent of Federal investments in AI, to include: R&D of core AI techniques and technologies; AI prototype systems; application and adaptation of AI techniques; architectural and systems support for AI; and cyberinfrastructure, data sets, and standards for AI; and

(b) the term "open data" shall, in accordance with OMB Circular A-130 and memorandum M-13-13, mean "publicly available data structured in a way that enables the data to be fully discoverable and usable by end users."

general provisions.

(a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of OMB relating to budgetary, administrative, or legislative proposals.Start Printed Page 3972

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.
